

Manjunath Halakoppa

Experience Summary

QA Professional with nearly 8.8 years of experience in team management, comprehensive API testing, and rigorous evaluation of web and mobile applications (Android & iOS). My expertise spans across the dynamic e-Commerce and fintech domains. I possess a wealth of experience with diverse open-source tools, underscoring my capability to discern and implement optimal solutions tailored to specific contexts.

S.NO.	Position Held	Period	Organization
1	SDET	Nov-2017 to till date	Qapitol QA Services Pvt. Ltd.
2	Software Test Engineer	Dec-2014 to Nov-2017	Sonata Software, Bangalore
3	Delivery Manager	Nov 2018 - Dec 2028	IT Pvt Ltd, Ragigudda

Skills Summary

Key Skills	API Testing and API Automation, Mobile App testing, Web App Testing, Mobile app Automation using Appium (Android & iOS), Web Application (Selenium WebDriver), Performance testing (Jmeter).
Tools used	Appium, Appium Studio, Selenium WebDriver, adb, Maven, Eclipse, IntelliJ, Protractor, Nightwatch, Browserstack, Saucelabs, Android studio, Xcode
Programming Languages	Core java, Python, SQL
Defect Tracking Tools	Bugzilla, Jira, Test Link
Web services Tool	Postman
Web Debugging Tool	Charles Proxy

Version Control tool	Svn, GIT
Operating Systems	Windows, Android, iOS, MAC
Continuous Integration	Jenkins, Heroku
AI	Langchain

Personal Details

Educational Qualifications	Bachelor of Engineering, SDMCET, Dharwad, Karnataka
Training and Certifications	ISTQB foundation level
Location	Bangalore - 560019
State	Honnavar, Ragigudda

Projects Summary

Role : **Delivery Manager**
Project : **Flipkart**
Period : **April-2022 till date**

Description

Flipkart is an Indian e-commerce website used for shopping online.

Key Responsibilities

Understanding client requirements and allocate resources with matching skills
Get client feedback on regular basis and work with the team to increase productivity
Help team with tech and non-technical challenges
Prioritize client's work, come up with a plan and resource allocation
Acts as a bridge between Qapitol and Flipkart to plan for next set of Goals and resource management
Provide overall solutions to client by understanding their challenges

Role : **Team Lead**
Project : **Customer App**
Client : **PhonePe**
Period : **July-2020 to March-2022**

Technologies / Tools Used / Environment : Java, IntelliJ, Postman, Appium, Jenkins, Maven, Manual Testing, XCUITest

Description

PhonePe Consumer app is a fintech platform used for UPI Payments, taking Insurance, Recharges and many more.

Key Responsibilities

Understanding Consumer App, writing manual cases and Automate it with XCUITest (iOS)
Write App upgrade tests with Appium and run them in Jenkins on daily basis
Test case maintenance for Appium and XCUITest scripts
Lead a team of 6 people and helped them with tech and non-technical challenges
Prioritise clients work, come up with a plan and resource allocation
Get client feedback on regular basis and work with team to increase productivity
Acts as a bridge between Qapitol and Phonepe to plan for next set of Goals and resource management
Contributed to Sauron Framework changes based on clients requirements

Role : **SDET**
Project : **BookMyShow**
Period : **March-2020 to till date**

Technologies / Tools Used / Environment : Java, IntelliJ, Postman, Appium, Jenkins, Maven, Manual Testing, BDD

Description

BookMyShow is online entertainment ticket booking system used to book for movies, concerts, live event streaming and activities near you to your fingertips

Key Responsibilities

Understanding Key flows in the application and developing automation scripts using BDD framework (Cucumber)

Automating test cases for Mobile(Android), mweb and Web

Integrating Scripts with browser stack.

Role : **SDET**
Project : **Merchant App and Customer**
App Client : **PhonePe**
Period : **Jan-2020 to Feb-2020**

Technologies / Tools Used / Environment : Java, IntelliJ, Postman, Appium, Jenkins, Maven, Manual Testing.

Description

Phonepe Merchant app was used to onboard Merchants onto the platform and once phonepe merchant is onboarded to platform it should be available in customer app.

Key Responsibilities

Understanding Key flows in the application and working in sync with Dev to Automate given flows using Appium (Android)

Testing data flow between Mobile, Web and Apis

Identifying data flow issues in case of functionality failure by checking server logs

In case of mobile testing (Android) identified issues by checking ADB logs.

Role : **SDET**
Project : **Last Mile (Logistics)**
Client : **Flipkart**
Period : **April-2018 to Jan-2020**

Technologies / Tools Used / Environment : Java, IntelliJ, Postman, Jax-RS, Jenkins, Maven, Manual Testing, JIRA, Node, Agile, JSON.

Description

Ekart is the No.1 e-commerce logistics company and preferred logistics partner of Flipkart. Ekart operations have been divided into 5 different assets – First Mile (FM), Mother Hub (MH), Last Mile (LM), Fulfilment Center (FC) and Large (for large appliances category). The customer cycle begins with customer ordering either through a website or through an app. The customer orders can be classified into two categories- Flipkart Advantage and Non Flipkart Advantage. Flipkart has partnered with some of the sellers and for these sellers Flipkart stores the goods in its own warehouse called Fulfilment Center. Flipkart also does packaging of these goods stored in its own warehouse and dispatches it to Mother Hub whenever an order is placed. For Non Flipkart Advantage shipments, shipments are procured directly from sellers and procured by First Mile from where it is sent to Mother Hub. Shipments are sent from source MotherHub to destination Mother Hub and from there Last Mile is responsible for finally delivering the shipment to the customer. This cycle is followed in reverse in case of returns orders.

Key Responsibilities

- Understanding Key flows in the application from Product and working in sync with Dev to test all possible flows

- Testing data flow between Mobile, Web and Apis

- Identifying data flow issues in case of functionality failure by checking server logs

- In case of mobile testing (Android) identified issues by checking ADB logs

- Created test environments by setting up instance with Kloud

- Implemented Continuous integration and deployment process on every PR to master by integrating with Jenkins

- Tested Rest API manually using postman and Automated using JAX-RS framework

- In case of issues it was reported in Jira by giving step explanation and logs attached

- Good hands-on in micro service testing with strong debugging skills to identify core issues

- Responsible for maintaining a test environment with updated code deployments.

- Debugging Dev code with local setup for adding more test cases and automating them

- Reviewing test code and approving PR.

Project : **Uninterrupted**
Period : **Nov 2017 to April 2018**

Technologies / Tools Used / Environment : Core Java, Selenium, Nightwatch, TestNg, Jenkins.

Description

Uninterrupted is a Lebron James fan engagement platform. The site provides athletes with a channel to communicate unfiltered, untainted information and commentary on their careers, personal lives, and more with their fans without fear of being misreported or taken out of context.

Key Responsibilities

Explore all the Key Flows in the application, challenges involved in Automating them and identify the best suitable tool & framework

Built the Javascript based Automation framework using Webdriver and Nightwatch

Built libraries to handle Video player events

Ensuring good Test Coverage of Sanity, Key Workflows and Regression Test Cases

Ensuring the Test Suites are integrated to the CI server.

Project : **HumaraShop**
Client : **Hindustan Unilever**
Period : **May-2017 to Nov-2017**

Technologies / Tools Used / Environment : Core Java, Selenium Web Driver, Appium, Maven.

Description

Humara2Shop is an e-commerce Android Native App developed for online grocery shopping, allowing the users the convenience of ordering online with the store they trust and prefer.

Key Responsibilities

System understanding, Test Design and ensure good Test Coverage

Responsible for identifying Regression Test Cases, test data creation using excel

Automate the Regression scenarios

Implemented Page Object model with ID and relative XPath as Locators

Handling different App popups, sync related functions using Appium and Selenium

Implemented Single Tap, Swipe functionality using Appium.

Project : **eJob**
Client : **GoodYear Tires**
Period : **Jan-2017 to April-2017**

Technologies / Tools Used / Environment : Core Java, Selenium Web Driver, Appium, Maven.

Description

Goodyear eJob is an Android mobile application, it is designed mainly for technicians of Goodyear so that they can perform some jobs (Dismount, Mount, Mount PWT, Physical swap, Logical swap, Regroove, Turn on Rim, Work on tire, Inspection) on tires related to the customers vehicle. The application interacts with dot Net middleware, which sends and receives data in the form file DB3 to the SAP server.

Key Responsibilities

- System understanding, Test Design and ensure good Test Coverage
- Implemented Page Object model with ID, Name and XPath as Locators
- Responsible for identifying Regression Test Cases, test data creation using excel and converting Regression cases to Automation test scripts using java
- Usage of ADB Commands for screen capture, copying build, installing, uninstalling of
- App Handling Sync functionality, different App popups by using Appium and Selenium
- Implemented Automation scripts for Globalization with more than 5 languages
- Maintaining Coding standards using SonarQube

Project : **eCasing**
Client : **GoodYear Tires**
Period : **Dec-2014 to Dec-2016**

Technologies / Tools Used / Environment : Core Java, Selenium Web Driver, Appium, Maven.

Description

Goodyear eCasing mobile application(Hybrid) is developed using Cordova ionic framework for Android and iOS platforms to increase in-house truck tyre casing collection by use of simple application by both Goodyear internal and external customers (Dealers, Casing Partners etc).

Key Responsibilities

- System understanding, Test Design and ensure good Test Coverage
- Involved in Test Automation Effort estimation of eCasing App
- Implemented Page Object model with ID, Name and XPath as Locators
- Responsible for Development of Scripts in java which were executed across different platforms (Android and iOS) with minimal Customization (less than 5%)
- Responsible for Development of generic methods in Mobile Automation Framework using WebView and Native View
- Responsible for TestSuite creation using TestNG for parallel execution
- Designing Test cases, preparing test data and end to end parallel test execution using Appium, Automation report generation using Extent Reports
- Responsible for GUI and Functional testing of Mobile App
- Responsible for Auto build generation (.Apk an .Ipa) using Jenkins.

Project : **Audit**
Client : **GoodYear Tires**
Period : **Oct-2015 to Jan-2016**

Technologies / Tools Used / Environment : Core Java, Selenium Web Driver, Appium, Maven.

Description

Goodyear Audit mobile application (Hybrid) is developed using Cordova ionic framework for Android and iOS platforms, includes devices with various screen sizes and in both orientations (Portrait and Landscape). Audit application is being developed to convert the audit process into more flexible and user friendly option by allowing auditors to conduct the audit process on mobile devices by enabling auditors to record answers to Questionnaire/Audits with minimum time and effort. The application interacts with the Audit portal where all the Audits submitted from mobile App will be available.

Key Responsibilities

- Analyzing requirements, creating test cases, creating Questionnaires in Audit portal
- Testing App for Multi User login, Language Translation
- Identifying Regression test cases for Mobile App Automation
- Responsible for GUI, Exploratory testing and Functional testing of Mobile app and Web portal
- Testing web portal in different browsers such as Mozilla, Chrome and Edge
- Involved in Regression Testing, Results Analyzing and defect reporting.
